## Foam impregnating foulard machine

For the impregnation of fleece materials, needled felt, non-woven fabrics, etc.

### Consisting of:

- 2 high-precision foulard rollers
- Frequency-regulated individual drive units
- Pneumatically-applied pressure and decentralized gap adjustment
- Stainless steel catch pan
- Foam feed (single-sided and double-sided)
- Traversing device (foam distributor)

### Technical data

Working width	up to 4.200 mm
Unit speed	up to 60 m/min.
Controller	PLC Siemens S7 – 300
Voltage	depending on the order
